Allowable Subject Matter

1. Claims 1, 4-6, 9-10 are allowable over the prior art of records.
2. The instant application is deemed to be directed to an unobvious improvement over the invention patented in Pat. No. 5,983,326 and 6,442,655. The improvement features include the step of providing a blocking flow control class transaction threshold indicating a maximum number of blocking flow control class transactions allowed to be processed in the memory access request transaction queue, and preventing the memory access request transaction queue from accepting any new blocking flow control class transaction if a current number of blocking flow control class transaction already in the memory access requesting transaction queue is not less than the blocking flow control class transaction threshold. The examiner agreed to allow the case after incorporating the above allowable features into the claims 1 and 6.
